Continuation Sheet (PTOL-303) 110/048,053

Application No.

Continuation of 2. NOTE: The amended filed on Nov. 21, 2003 fails to overcome the rejection and the amendment necessated the new ground of rejection "at least one optical ffedback element which receives light output from the laser and return". Sannders discloses an optical apparatus comprising linear HeNe gas laser having a resonant cavity (see abstract) and at least 0.1% of light output of the laser to be return toward the laser that means the range of light to be return is very big so all the light feedback to have on that range. Further the claim fails to recite any optical apparatus structure for frequency stabilized linear HeNe gas laser that can read on figure and does no show any element to form the feedback. It is notorious old in the art to have an apparatus comprising: a frequency stabilized linear. See more the patents to Deck (U.S. Patent No. 6,434,176), Hanspeter Brandli et al. (U.S. patent No. 3,594,659), and Grynberg et al. (U.S. Patent No. 4,492,862) for the HeNe laser. The claim is not patenable over Sanders et al..
